

BEACH CLEANUP

WHEN: -----/-----/-----

LOCATION: -----

Together we keep it clean!

More than ten million tonnes of plastic end up in the oceans every year. That is no less than 444 kilograms per second! Harrowing figures, with catastrophic consequences for people and environment. Plastic kills marine animals and crumbles into tiny particles that are very toxic and eventually end up on our plates again.

14 LIFE BELOW WATER

The sustainability ambitions of Jan De Nul Group reach far and its employees are happy to help achieving them. By keeping our natural working area – the sea and the beaches – nice and clean, we take our social responsibility.
